

TRACK YOUR LENGTH — POINTS BELOW ARE BANKED WHEN YOU DIE AT THAT LENGTH

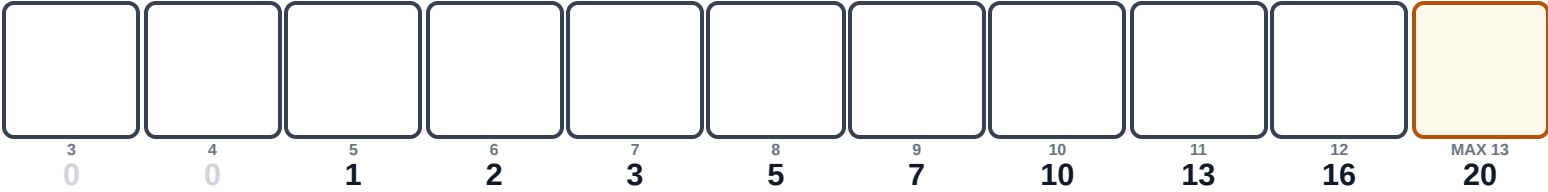

At MAX (13): no more growth — each food scores +10 points instantly (a ×2 bounty chip = +20).

Program 2–6 cards face-down (left first). Arrow = 1 · Boost = 3. First lock starts the 15-sec timer.
Resolve: boosts slide first, then all arrows step together. Same square same moment = both die; hitting anything sitting still kills only the mover.

Food is printed and never runs out (+1). **+2 boost token** = draw 2 boost cards.
Bounty chip = ×2 food.
Death: bank your length, flip every other segment to bounty, respawn on 3 contiguous cells touching any board corner.
